

AUTOMATED PACKAGING SYSTEM

Description: An Automated Packaging System is used in industries to automatically fill, seal, and package products with minimal human intervention. It improves productivity, accuracy, and packaging quality.

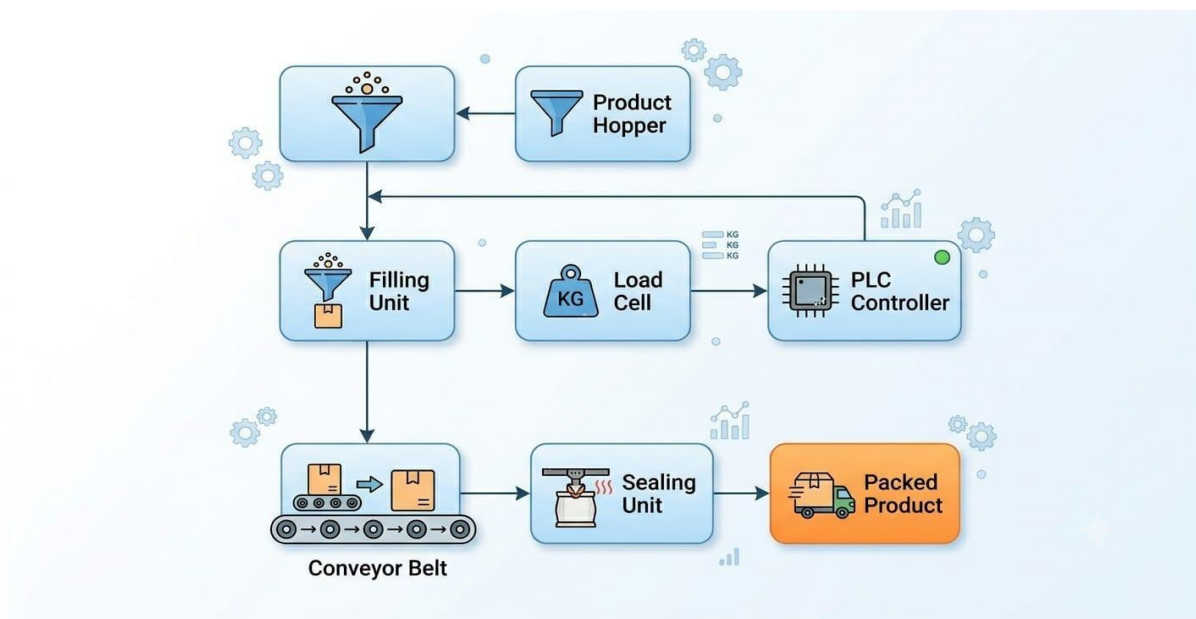

Working Principle:

- ✓ An empty package is detected by the system.
- ✓ The filling unit dispenses the required product quantity.
- ✓ A load cell checks the target weight.
- ✓ Once the required weight is reached, filling stops.
- ✓ The package moves to the sealing unit.
- ✓ The sealed package is sent to the output conveyor for dispatch.

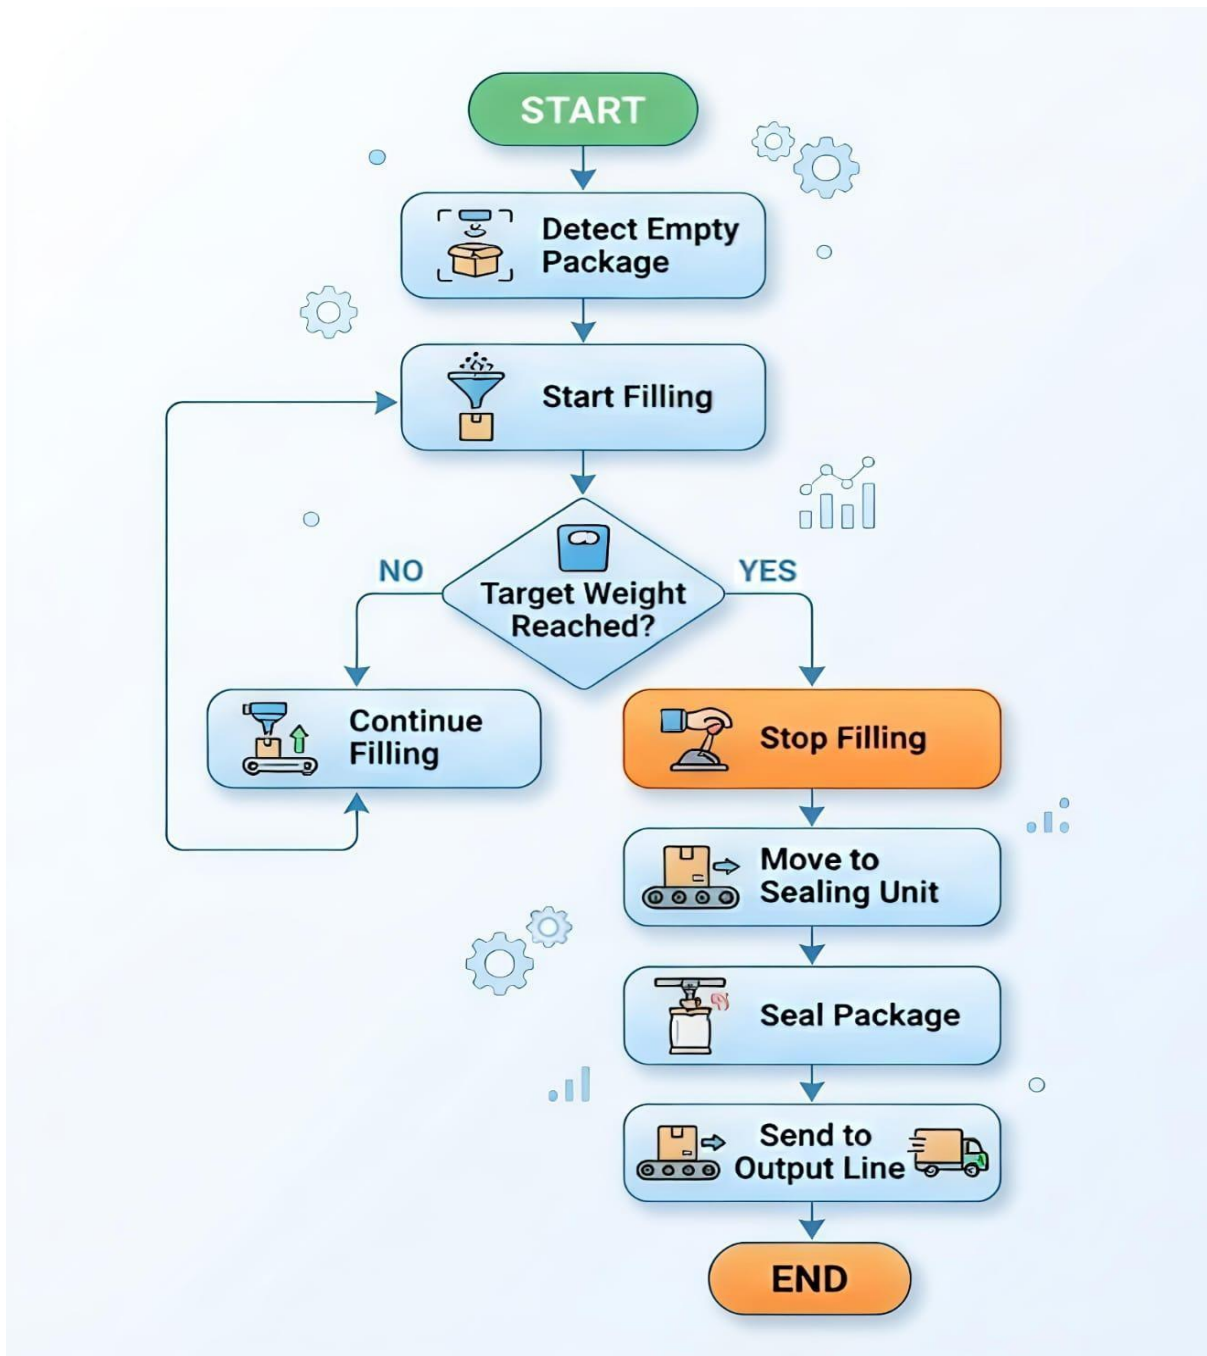

Components Used:

- ✓ Product Hopper
- ✓ Filling Unit
- ✓ Load Cell Sensor
- ✓ PLC Controller
- ✓ Conveyor Belt
- ✓ Sealing Unit
- ✓ Power Supply

Flowchart:

Advantages:

- ✓ Increases packaging speed
- ✓ Reduces product waste
- ✓ Ensures accurate filling and sealing
- ✓ Minimizes human effort
- ✓ Improves production efficiency and quality
